

**Reflection Questions: (give claim, evidence, and reasoning for your answer)**

- 1. What was your Q3 grade (give percentage)? Do you feel like you did your best for the 3<sup>rd</sup> quarter of Biology (use your grade printout or edline)?**
  - Explain and give specific examples from your printout or from edline.**
- 2. Use your grade printout to do the following calculation to find out what you need to get 4<sup>th</sup> quarter to pass this class.**

**Add your Q1 + Q2 + Q3 percentages = \_\_\_\_\_**

**Then subtract the total from 240.**

**240 - \_\_\_\_\_ = \_\_\_\_\_ (this is the % you need next quarter to pass the year. If it is a negative number you are guaranteed to pass the class with at least a D (60%))**

**(for an A use 360, for a B use 320, for a C use 280)**

**\*If it is greater than 90% you need to come and see me ASAP**
